

Create a new company database with cascade

1. **Run the script in the company cascade folder that creates the database and insert data into the tables.**
Which cascade operations are added?
Discuss what they do!
2. **Run the script that add the foreign key from department to manager**
Why is it added after insert of data into the database?
3. **Run the script that delete department number 4**
In which table are rows deleted and in which table are rows changed?
4. **Run the script that update department number 1**
In which tables are row changed?
5. **Run the script that delete employee with ssn 123456789**
What are the problem?
Make the changes in the table definition that makes it possible to delete the employee.
Try to delete the employee with ssn 123456789
